SUMMARY

Aspiring software developer with strong backend and full-stack experience, passionate about impactful systems. Focused on building intelligent and user-centric applications with Python, Flask, React Native, and database-backed architectures.

TECHNICAL SKILLS

Languages: C++, Python, JavaScript, Typescript

Frameworks: Flask, FastAPI, Express.js, React, React Native, Tailwind

Databases: MongoDB, MySQL, SQLite, Neo4j

Tools: Git, Postman, Docker, Firebase

Concepts: REST APIs, gRPC, GraphQL, WebSocket, Machine Learning

PROJECTS

Movie Recommendation System

Pandas, scikit-learn, React, Flask

Built a personalized movie recommendation engine using content and collaborative filtering techniques.

Implemented a session-based algorithm to improve recommendations using real-time user interaction behavior.

Created an interactive UI using React and managed backend logic with Flask and MongoDB.

UrbanServe – Local Services Platform

React, Firebase, MySQL, Node.js, Express.js

Implemented real-time provider matching, booking workflows, and role-based access (provider vs. customer).

Used Firebase for authentication, MySQL for data storage, and React for responsive UI.

ACHIEVEMENTS

- Secured Top 10 (Nationwide) in the **NetElixir Algnition Hackathon 2024** by building an ML model to optimize digital advertising impact for tech giants like Google, Meta, and Microsoft.

EXPERIENCE

Software Development Intern

Equations Work

Jan 2024 – Apr 2024

Pune, Maharashtra

- Gained hands-on experience with Neo4j, Flask, 3D libraries, and data modeling.
- Explored new technologies across backend, visualization, and graph databases.
- Worked on multiple internal tools and prototyped application features.

EDUCATION

Savitribai Phule Pune University

B.E. in Computer Engineering

2022 – Present

Pune, Maharashtra

CERTIFICATIONS

- Mathematics for ML: Foundational Concepts – Coursera
- Neo4j Fundamentals – Neo4j
