Summary-

Enthusiastic problem solver with a strong programming skill set, committed to continuous learning in the tech world. I embrace challenges and prioritize effective communication while collaborating on innovative projects. Excited to explore new technologies and contribute meaningful solutions to dynamic teams. Skilled in Machine Learning, Deep Learning. Proficient in Python, C++, TensorFlow, SQL.

Education

Savitribai Phule Pune University

Bachelor of Engineering in Computer Science, Honours in ML, DS

2022-2026

GPA-8.8/10

Experience

SDE Intern

April 2025 – Present

R2TalentXplore Pvt.Ltd.

Dynamic Pricing Prediction Model

- Led the development of the company website and automated performance report generation from multiple physical biomechanical tests using HTML, CSS, C# and .NET.
- Assisted in research and development of statistical prediction model to predict athlete performance in athletics field events based on specific physical and biomechanical tests.

Sports Analytics Intern

January 2025 – March 2025

Infosys Springboard

Data / Video Analysis of Sports Datasets

- Applied data analytics and visualization tools such as Tableau, Power BI, Ludimos, and Kinovea to process and analyze sports performance data.
- Automated and optimized performance trend reports while collaborating on data-driven models to deliver actionable insights for athlete performance and strategic planning.

SDE Intern

June 2024 – June 2025

Growloc Pvt. Ltd.

Dynamic Pricing Prediction Model

- Developed and implemented a dynamic pricing model for agricultural commodities across India using deep learning and neural networks, optimizing pricing strategies with improved accuracy and responsiveness to market conditions.
- Built visual plots and interactive dashboards to present complex data insights in an intuitive, stakeholder-friendly format, enabling data-driven decision-making.

Technical Skills

- Languages/Databases:** Python, C++, SQL(MySQL, Postgres), MongoDB, JavaScript, HTML/CSS
- Frameworks:** TensorFlow, PyTorch
- Developer Tools:** GitHub, Google Colab, Kaggle, Visual Studio Code, PyCharm
- Libraries:** NumPy, Pandas, Matplotlib, Seaborn, Streamlit, Plotly

Projects

Loan Default Risk Prediction & Interest Optimization Platform | Python, Scikit-Learn, Flask, Next.js, Node.js, MongoDB

- Developed a full-stack web application with a Next.js frontend, Node.js backend, and Flask-based ML API to predict loan default risk percentages and recommend optimized interest rates.
- Delivered a secure, scalable, and responsive platform that enables financial institutions to make accurate, data-driven lending decisions in real time.

AgriPredict 2.0 | Python, Pandas, Numpy, TensorFlow, Keras, PowerBI

- Built a deep learning-driven dynamic pricing model to predict agricultural commodity prices across India, improving pricing accuracy and responsiveness to market changes.
- Designed visual dashboards to present data insights for stakeholders, supporting strategic planning and data-driven decisions.

Content Based Drug Recommendation System | Python, Pandas, Scikit-Learn(TF-IDF, Cosine Similarity)

- Built a content-based drug recommendation system leveraging Natural Language Processing (NLP) techniques to analyze and compare the textual composition of 100,000+ Indian medicines.
- Used TF-IDF vectorization and cosine similarity to ensure accurate, reliable, and cost-effective recommendations.
