SUMMARY

Final-year Computer Engineering student with hands-on experience in backend development, automation, and system integration. Skilled in building reliable APIs, managing databases, and developing scalable cloud-ready applications. Strong foundation in software engineering fundamentals with applied experience in debugging, CI/CD pipelines, and distributed architectures. Focused on designing efficient, maintainable solutions for enterprise-scale IT systems.

SKILLS

Programming Languages: Python, C++, SQL, JavaScript/TypeScript

Frameworks & Tools: FastAPI, Flask, React.js, REST APIs

Databases: MySQL, MongoDB, SQLite, Neo4j, PostgreSQL (exposure)

Cloud & DevOps: AWS Cloud Foundations, Google Cloud Run, Firebase Hosting, CI/CD (GitHub Actions), Postman

Core Competencies: Systems Design, Debugging, Software Reliability, API Integration, Agile Collaboration, Adaptability, Data Management, CS Fundamentals

EXPERIENCE

TRAINEE SOFTWARE ENGINEER

Equations Work IT Services Pvt. Ltd.

JAN 2025 – MAR 2025

Pune, India

Built and optimized RESTful APIs in Python for data ingestion, improving backend efficiency and reliability.

Collaborated via GitHub for version control and code integration within a cross-functional team.

Assisted in debugging and testing backend modules to enhance code stability and maintainability.

PROJECTS

Code Vulnerability Detection System (Python, scikit-learn, AST parsing) – Developing a static code analysis tool using local, open-source LLMs to detect vulnerabilities securely without external API dependencies. Architected the system for future deployment in an air-gapped environment to ensure complete data confidentiality.

E-commerce Aggregator Web App (Python, Flask, BeautifulSoup, SQLite) – Built production-inspired ETL workflows to aggregate, preprocess, and store pricing data from multiple sources with authentication and product management.

Hybrid Movie Recommendation System (React, Flask, MongoDB Atlas, scikit-learn) – Designed and deployed a hybrid recommender using content-based (TF-IDF + cosine similarity) and collaborative (SVD) filtering. Built automated data pipelines and exposed the engine via robust REST APIs.

EDUCATION

B.E. IN COMPUTER ENGINEERING - 8.86

Marathwada Mitramandal's College of Engineering, Savitribai Phule Pune University

2022 – 2026

Pune, India

ACHIEVEMENTS

Top 10 Nationwide, NetElixir Algnition Hackathon 2024 – Built and deployed scalable ML pipelines using Random Forest for multi-platform ad conversion prediction. Applied feature engineering and statistical modeling to deliver actionable marketing insights with 85%+ accuracy.

CERTIFICATIONS

Machine Learning – Coursera (Andrew Ng)

AWS Academy Graduate – Cloud Foundations

Introduction to MongoDB – MongoDB University
